

LOUIS MOINET VARIOGRAPH

The Variograph is an eloquent depiction of Louis Moinet's creative vision—the type of horology the brand's namesake would have created were he alive today.

This timepiece possesses two features exclusive to the Louis Moinet brand that were inspired by the namesake's original work: a full moon indicator (at the 6 o'clock position) and a world map that revolves around its own axis once every 24 hours (9 o'clock position). The ring framing the depiction of the world allows the wearer to easily read the time anywhere on the globe. This display is synchronized with the main time shown by the hands.

This automatic timepiece is housed in a stately stainless steel case that measures 40 x 52.33 mm. It is available in a limited edition of 60 pieces and can be purchased for \$13,100.

LAMBORGHINI GALLARDO

LAMBORGHINI GALLARDO

LOUIS MOINET TWINTECH

Louis Moinet was a gifted artist and horologist who lived in eighteenth-century France. His passionate study of horological art even led him to become president of the Société Chronométrique de Paris. Clients of Louis Moinet included Napoleon and U.S. Presidents Thomas Jefferson and James Monroe.

The modern Twintech wristwatch's movement was developed on the basis of sketches Moinet published in 1848. The name finds its origin in the twin spring barrels that provide 120 hours of power reserve to the

manually wound movement. The dial also displays this phenomenal power reserve in the lower right corner as well as the date in a retrograde manner, which sees the hand instantaneously jump back to the start once the end of the month has been reached (upper right corner). The Twintech is available in a limited edition of 60 pieces in a stainless steel case; this version features an "Old Rose" dial and retails for \$17,900.
